Subject: Crashed Hard Disk

I have some very interesting news. I don't know if I mentioned to you that on November 24, 1992 a UFO apparently crashed out in Long Island at a place called South Haven Park, not far from the Brookhaven National Laboratory. The area was cordoned off for four days with black suited Swat teams blocking all access to the area.

The object was removed to BNL but someone there leaked some video which appeared on the Fox News Network special aired about two months ago. I have learned that a gov't worker who opposes the cover-up leaked the tape to Fox News but another piece exists which was not aired. The unaired segment purportedly shows alien artifacts (bodies) and is in the possession of a group out in Long Island with whom I have made contact in the last few days. I saw some crude video capture polaroids of the forms and it has sparked my curiosity.
